

The ₳5,000 Gap

Where an active blind-spot & collision-warning device priced at ₳5,000–8,000 sits against Bangladesh's Chinese dashcams, action cameras, and the global ADAS category — and why the two aren't the same market.

Prepared: 06 Sep 2026 Subject: Bangladesh 2-wheeler dashcam/ADAS landscape

Target price: ₳5,000–8,000

01 Executive summary

- **The fleet is large and growing:** 466,858 motorcycles sold in Bangladesh in 2025, up 19% year-on-year — a multi-million-unit installed base for an aftermarket safety accessory.
- **Nobody sells real ADAS for motorcycles here.** Every Bangladeshi product we found is either a passive recorder (dashcam) or a content-capture tool (action camera). None does predictive blind-spot or collision-warning alerting. That's the category Indriyo is actually creating, not entering.
- **Smart Technologies (BD) Ltd — the competitor you named — isn't a dashcam company.** It's Bangladesh's largest ICT distributor and the official DJI/Insta360 importer. Its motorcycle-relevant business is motovlogging action cameras, a different product for a different buyer. See §03.
- **Your price sits in a real, currently empty band.** Branded dashcams (70mai, via Star Tech/BDStall) retail ₳9,500–10,700+. Generic unbranded Daraz bike cameras start near ₳2,000. Nothing named sits inside ₳5,000–8,000 today.
- **The safety narrative is real and large:** motorcycles are involved in roughly 35–40% of Bangladesh's road accidents and fatalities in 2024–2025 reporting — though no publisher breaks out rear-end collisions specifically, so don't invent that number in marketing copy.
- **Local assembly is a real but unquantified cost edge.** A ~₳3,000 ESP32 + 3D-printed BOM likely avoids the duty/VAT stack a boxed, finished Chinese import pays — but get an HS-code-specific NBR quote before betting the margin model on it.

02 **Market size & addressable base**

Bangladesh's motorcycle market is mid-recovery after a multi-year slump, and every unit sold is a potential Indriyo mount point.

Share held by top 5 brands
Yamaha, Honda, Suzuki,
Hero, Bajaj

262,000

BRTA new registrations, 2024
lowest since 2015 – see
note below

Brand share of 2025 unit sales

Top 3 brands are effectively tied near 20% each; no single brand dominates the addressable base.

Scale: bar length ≈ % share, axis max 22%. One published source set shown; a second (TBS/Autocar Professional cross-reference) gives Yamaha 20.8% / Honda ~20% / Suzuki 19.08% / Hero 17.8% / Bajaj 15.7% — sources disagree by 1–3 points per brand, but agree the top three are essentially tied. Treat exact ranks as directional, not precise.

DATA CAVEAT

Annual unit-sales figures (466,858) and BRTA new-registration counts (262,000) diverge substantially and come from different tracking methods (dealer/showroom sales vs. formal registration). Read the installed base as "several million motorcycles already on the road," not as the annual sales figure alone — that's the real addressable market for an aftermarket accessory.

03 **Competitive landscape**

Three distinct product categories get lumped together as "bike camera gadgets" in casual conversation. They are not the same market, and mapping them out is the whole point of this memo.

PLAYER	ACTUALLY SELLS	BD PRICE	CHANNEL	ACTION
Generic / unbranded Daraz "bike-dashcam" / "motorcycle-dashcam" tag listings	Dual-lens passive video recorder	৳2,000–5,000	Daraz	• Re
70mai (Xiaomi ecosystem)	Car-focused dashcams: M300, A500s Pro+, A800 4K	৳9,500–10,700+	70mai.com.bd, Star Tech, BDStall, Shopz	• Re
Transcend	Dashcams, some listed with a "motorcycle" tag	n/a not isolated in search	Star Tech	• Re
Smart Technologies (BD) Ltd	DJI / Insta360 action & vlogging cameras — a 100+ brand ICT distributor, not a dashcam house	n/a action-cam pricing, different SKU class	BikeBD accessory-importer listing, smart-bd.com	• Di
Global ADAS Chigee AIO-5, INNOVV ThirdEYE	Radar/camera blind-spot + collision warning	\$399–598 US/EU price, not landed in BD	No Bangladesh distributor found	• Ye
Indriyo (proposed)	Camera-based blind-spot + time-to-collision alerting	৳5,000–8,000	Direct + biker channels (see §06)	• Ye

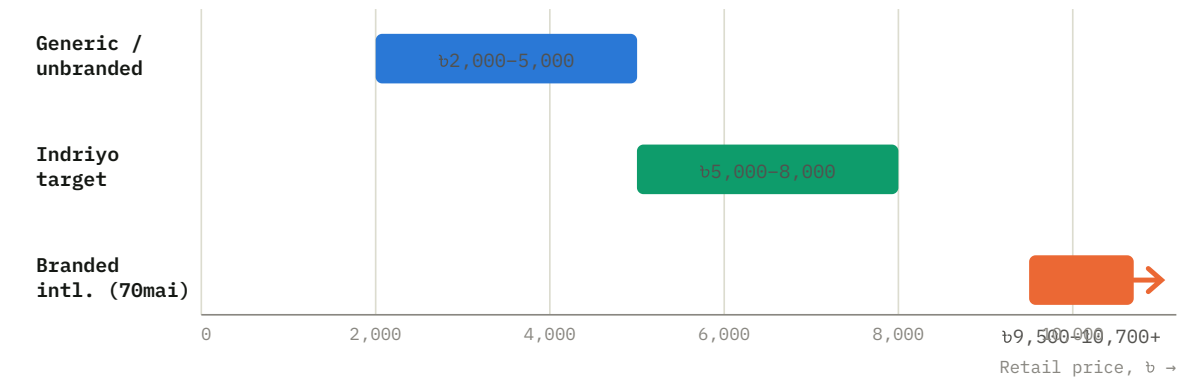

Smart Technologies (BD) Ltd is a genuine large player — but as an ICT/electronics distributor whose bike-relevant line is DJI/Insta360 motovlogging cameras (content capture for riders who film their rides), not a safety-alerting product. It's an adjacent brand with distribution muscle worth watching if it ever moves into ADAS, not a head-to-head competitor today.

04 Where ₳5,000–8,000 actually sits

Laid on a single price axis, the target band is not "cheap dashcam" territory — it's a gap nothing named currently fills.

Bangladesh bike-camera price ladder

Retail price, BDT · bar width = observed range

FOR REFERENCE, OFF THE CHART

Global camera/radar ADAS systems (Chigee AIO-5, INNOVV ThirdEYE) retail at \$399–598 in the US/EU — roughly ₳49,000–73,000 at a straight currency conversion, before any BD duty or landed-cost markup. They are not imported or distributed in Bangladesh. Indriyo's target price is **6–9× cheaper** than the only other products in the world that do what it does.

05 Cost structure & import duty

What we found: Bangladesh's customs treatment of electronics is fragmented by HS code. General computer parts/accessories

BEFORE PRICING GOES FINAL

carry a headline duty near 2% with VAT/supplementary duty often waived; some professional camera categories are duty-free under specific codes. Consumer dashcams and action cameras likely sit under a separate, higher-taxed consumer-electronics heading — the exact rate depends on the declared HS code and value per shipment, and we could not pin down a dashcam-specific figure.

What that implies: Indriyo's ~৳3,000 local BOM (2× ESP32-CAM, buck converter, 3D-printed housing, assembled in Dhaka) likely sidesteps the finished-goods duty + VAT stack that a boxed, imported Chinese dashcam pays at the border. That's a real structural advantage — but it's currently a hypothesis, not a costed number.

Get an NBR HS-code-specific duty quote for finished dashcams/action cameras and compare it against your component-level import costs. If the gap is as large as it looks, it's worth stating explicitly in marketing/investor material; if it's small, the pricing case rests on labor cost and category-newness instead.

06 Distribution channels

Two very different shopping contexts exist for this product, and they lead to different buyers.

General electronics (gadget buyer)

- Daraz.com.bd — dominant online marketplace, dedicated "bike-dashcam" tag pages
- Star Tech, BDStall, Ryans Computers — established e-tailers carrying branded dashcams/action cams
- BDTronics, TechShopBD — component-level electronics (your own supply chain, per `buylist.md`)

Motorcycle / rider community (safety buyer)

- BikeBD — leading motorcycle media & marketplace, editorial reach
- BikeBikroy.com, EMotoBazar — aftermarket accessory classifieds/retail
- Bongshal.com, Redliners BD — Dhaka biker concept store
- Facebook rider groups — Bangladesh Bike Riders, BD Biker Club, MotorcycleBD

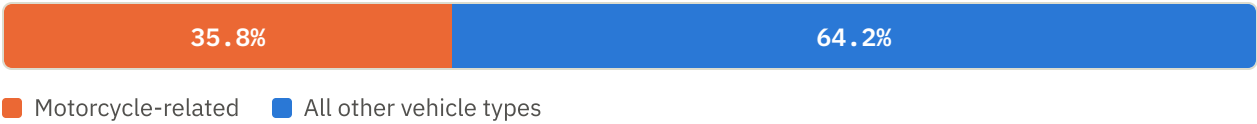

A specific claim about "Elephant Road" as a bike-electronics hub could not be confirmed in this research and should be treated as unverified rather than cited.

07 The safety narrative

Motorcycles carry a disproportionate share of Bangladesh's road toll — a real, sourceable backdrop for an active-safety pitch, even without a rear-end-specific statistic.

Motorcycles' share of road deaths, 2024

2,609 of 7,294 reported road deaths involved a motorcycle

Source: The Daily Star, citing 2024 road-fatality data. A separate 2025 Road Safety Foundation report puts the motorcycle share nearer 40%, against a higher total death count than BRTA's own figure for the same year — the two trackers use different methodologies and disagree on totals. Cite the range (35–40%), not a single decimal point, and do not claim a rear-end-collision-specific percentage: no publisher breaks that figure out separately.

08 Position assessment

Strengths

Only active-alerting product found in the BD 2-wheeler market at any price. Low local BOM. A genuine, large, rising safety narrative to sell against.

Weaknesses

Unproven brand versus established Chinese electronics names. ESP32 + 3D-printed housing may read as less "finished" than a boxed 70mai unit. Monsoon/vibration durability unverified at scale.

Opportunities

Large, growing fleet (466K+ units/yr, millions installed). Zero direct ADAS competitors. Can own "active safety" as its own category, avoiding price comparison to passive recorders entirely.

Threats

Chigee/INNOVV-style global ADAS players entering via Daraz/import once the category is proven. A generic Alibaba blind-spot-radar kit undercutting on price. BSTI import-safety certification requirements unresearched.

09 Recommendations

- **Don't call it a dashcam.** Market it as active blind-spot & collision alerting — a category of one in Bangladesh — so ₳5,000–8,000 is never compared line-for-line against a ₳2,000 passive

recorder.

- **Price toward the top of the band** (৳7,000–8,000). That's still 25%+ below the cheapest named branded dashcam (70mai M300, ~৳9,500), while signaling "safety hardware," not "cheap gadget."
- **Launch through rider-trust channels first** — BikeBD review coverage, Facebook rider groups, EMotoBazar/Redliners BD physical presence — before a generic Daraz mass listing. Safety products sell on community trust here, not marketplace search.
- **Confirm the two open numbers before finalizing retail math:** an NBR HS-code duty quote, and BSTI certification status for a camera-based rider-safety device.
- **Watch, don't chase, the global ADAS players.** If Chigee or INNOVV (or a generic radar clone) lists on Daraz within the next 12–24 months, the "no ADAS competitor" white space closes — re-run this scan at that point.
